

SGF Project Summary

Project Title: Community based knowledge for sustainable coastal and marine resources management

Grantee: Sustainable Development Foundation [SDF]

Project Location: Laem Klad Sub-District in Muang District and Mai Rood Sub-District in Klong Yai District, Trat Province. The networking and knowledge management will impact 5 Sub-districts in Ao Trad.

Topic/Themes of the project: Knowledge management

Duration: 12 Months

MFF Grant Amount: THB 796,450

Background: Laem Klad and Mai Rood Sub-districts have diverse biodiversity and marine and coastal resources ranging from mangroves, salt marsh to rare marine animals and are neighbouring with Cambodia. Locals have experience and knowledge in coastal conservation passing from generation to generation. However, no structured documentation on such experiences and lessons learned is available and shared among relevant stakeholders and the general public. Documentation and knowledge sharing will enable locals and relevant stakeholders to develop recommendations and measures on resource conservation and sustainable development.

In addition, SDF and Kasetsart University will assist MFF/SGF in documenting good practices and lessons learned from the communities and in supporting the monitoring process of grantees.

Target beneficiaries: Mairood Sub-District: 1,120 out of 1,408 households who earn their living through fishery and agriculture and depend upon provisions of marines for livelihood activities. The per capita income is THB 25,000.

Laem Klad Sub-District: 2,000 out of 2,501 households who earn their living through fishery and agriculture and depend upon provisions of marines for livelihood activities. The per capita income is THB 23,000.

Main Activities	Main Anticipated Result	Indicators/Baseline data	Results Framework Output Objective Code
1. Developing database and knowledge on marine and coastal resource conservation through consultation	1. Guideline and database on marine and coastal resource conservation is developed and used as knowledge management tools. 2. Locals have increased capacity on	1. 1 inception meeting with locals and relevant stakeholders is conducted. 2. 1 capacity building training on data collection and knowledge management process is conducted.	Output objective 1 Indicator 10

meetings and workshops	<p>knowledge management.</p> <p>3. Knowledge and lessons learned from projects are documented and analyzed.</p> <p>4. Knowledge management materials are produced and disseminated to locals and public.</p>	<p>3. At least 35 locals participated in consultation meetings and capacity building workshops.</p>	
2. Enhancing capacity on marine and coastal natural resources conservation to community members	<p>5. Developed database and knowledge is accessible and used in marine and coastal resource management by locals and governmental agencies.</p> <p>6. Local knowledge and lessons learned are replicated in other areas.</p> <p>7. Network among locals and stakeholders on environmental conservation is strengthened.</p>	<p>4. 2 consultation meetings to discuss on knowledge and lessons learned.</p> <p>5. At least 120 locals and stakeholders discuss and provide comments to developed sets of knowledge.</p> <p>6. Knowledge gained and lessons learned on marine and coastal resource conservation is disseminated to at least 120 fisheries community members, stakeholders and public.</p>	Output objective 1 Indicator 6
